

Hi Lew,

Hope 2019 is treating you well. I just completed another project on the Router Boss that I want to share with you. It is a bowl/tray made from cherry with a walnut accent stripe. A forstner bit was used to remove most of the waste from the bowl's interior then finished milling the interior was done on the mortising table using a bowl making bit. The interior came out almost perfectly smooth and required only couple minutes of sanding. I didn't even need to make a pattern. I could never have achieved this result with a handheld router even with a pattern.

Best Regards, Tim Kirby
