

I have attached a couple pictures of my first Router Boss project which was a desk for my grandson. In this project I used the Router Boss for mortise and tenons that join the legs to the feet, dovetail joints in the drawer and for placing dowel pins in the desktop. I should also mention that this was the first piece of furniture that I made in my entire life and I probably couldn't have done it without the Router Boss.

Best Regards,

Tim Kirby
