Serious Woodworkers Need Serious Tools ...

It Doesn't Get Any More Serious Than Router Boss

Router Boss transforms a wood router into a professional grade milling tool capable of multiple woodworking tasks including:

- Mortises
- Tenons
- Grooves
- Dovetails (all types)
- Box Joints
- Raised Panels
- Dados
- Miters
- Half-Laps

As a woodworker, precision in your work is an absolute must. Router Boss provides the unparalleled detail you've been looking for but unable to achieve with other tools.

Conceive It and Achieve It with Router Boss

With Router Boss, the only thing that you're limited by is your own creativity. You can streamline your productivity without worrying about confining templates, guide bushings or metal fingers. With Router Boss you focus on the woodworking project rather than the tool limitations.

Manage Dimensions from Every Angle

Joinery is where the rubber meets the road in woodworking. Precision in guiding and controlling your cuts is the deciding factor between an amateur looking and professional grade piece.

Router Boss gives you the best control possible to manage a clean cut in any dimension (on edge, face or end of a board) mitigating the risk of mistakes or even injury.

Designed for ease of use as well as performing multiple functions, Router Boss will increase your productivity and satisfaction in all your woodworking projects.

Some of its unique features that make Router Boss unlike any woodworking tool you've ever worked with:

- The router is right-side-up allowing full access
- You can observe and control the cut as it is made
- Scales, cursors and precise stops position cuts accurately
- The wood is transported by a crank feed system
- Break-out free climb cuts are made safely
- Angled cuts are made effortlessly with machine guidance
- Super simple mortising with crank feed and plunge assist
- Unrestricted choice of cutters and wood dimensions
- Create templates for your cuts on your computer

To put your Router Boss to work all you need is a plunge router and some bits. You can use the router and bits you currently own.

If you are purchasing a new router, we recommend the DeWalt 625. It fits the Router Boss perfectly.

For joinery operations you need straight and dovetail bits. Our bits have extra long 1/2" shanks that are best with Router Boss. Our narrow-neck dovetail bits provide a hand-cut look.

Router Boss can revolutionize your woodworking

We offer a range of accessories that enhance and extend Router Boss's capabilities. Our Accessory Package bundles 5 helpful accessories at a 10% savings.

Router Boss Redefines Woodworking

Whether you are in business for yourself making custom furniture, or just a serious hobbyist who loves traditional woodworking, chances are you've spent a small fortune on tools and jigs that are limited in their scope and function.

Router Boss eliminates the need for a stockpile of woodworking jigs. Free up space in your work area, and rely on Router Boss' versatility to master the joinery techniques you've been trying to replicate.

See Your Productivity Soar

Router Boss allows you to complete more woodworking projects faster, due to its nimble design and versatility. Use any bit, make any cut, and create any type of joinery cleanly and beautifully with Router Boss. Unclutter your valuable workspace and have more room for completed projects as the time you spend on any piece is reduced.

See Your Cuts Clearly

Router Boss gives you clear visibility while your cuts are being made, unlike most jigs or router tables. This means less costly mistakes in materials and time wasted.

21st Century Innovation

Router Boss provides serious woodworkers the best of both worlds: cutting edge technology to produce the same hand-hewn masterpieces our ancestors created.

A few of the technological innovations include:

- **LED lights to see work up close**
- **Dual laser crosshairs to display cut area without guesswork**
- **Optional digital scales offer repeatable precision positioning**
- **Web based design tool creates precise cut patterns**

Safer Than a Router Table

Woodworking requires vigilance when it comes to safety. Router Boss firmly grips the wood you are working, and cuts can be made in any direction. Dust is minimal, due to collection behind and in front of the bit. Safer than any router table, Router Boss gives you superior control, creativity, and design capabilities with less risk.

Take Your Woodworking to the Next Level

If you have been looking for that one tool to take you to the next level in your woodworking, you've found it in Router Boss.

Designed as a bench or wall-mounted workstation, Router Boss hangs on 2 aluminum cleats. It has both front and rear dust collection with standard shop-vac hose connections.

Features and Benefits

- USA-made I-beam channel with optional choice of 36", 42" or 47" sliding bar for exceptional work-holding capacity.
- Steel v-guides riding in UHMW v-grooves provide low friction glide surface for sliding bar.
- Aluminum fixed fence and a moveable fence with push button release provide rock-solid clamping of work piece.
- A crank handle powers wire/pulley drive system to provide either 28", 34" or 39" of sliding bar travel with no backlash.
- Dust collection chutes behind bit and under front base plate with 2.5" (63mm) hose connections.
- Aluminum base plate provides strong support for router when cantilevered over work and can be angled up to +/- 45-degrees.
- Available plunge assist bars for the router provide enhanced plunge control and a convenient handle for guiding and positioning the router.
- Dual lasers and LED lights in acrylic router plate indicate center of cut and illuminate work piece.
- Variable-angle guide rails for router with positive angle stops every half-degree simplify setup for dovetail pins and other angled cuts.
- Available micro-adjustable stop for precise adjustment to the fit of tenons and other joints.
- 24" (600mm) rulers on face of machine provide fractional inch and metric readings and work with two sliding cursors for positioning of cuts.
- Available X-axis (left/right), Z-axis (front/back) and Y-axis (vertical) digital scales with mm, decimal inch and fractional inch LCD display.
- Available 31" by 7" adjustable height/tilt mortising platform with 5 t-tracks and 2 vice clamps/stops. It can also provide a vertical t-track clamping surface.
- Available 15" wide work holder for vertical and horizontal clamping of work piece at single/compound angles.

"There are few tools that attempt to cover such a broad spectrum of joints such as the Router Boss, it's one of the most effective joint making solutions on the market" — **Phil Bumbalough, BenchMark**
